

Jean Koletto Reichmann GALY

DATA ENGINEER · BACKEND DEVELOPER

Saint-Pierre, Reunion, France

📞 (+262) 693 50 18 66 | ✉️ reichmann.galy@esiroi.re | 🌐 ReichmannGaly | 🌐 Jean Koletto Reichmann GALY

Education

Engineering Degree in Computer Science - First year postgraduate

Sept. 2025 - 2028

ÉCOLE SUPÉRIEURE D'INGÉNIEURS RÉUNION Océan Indien (ESIROI)

Saint-Pierre, Reunion, France

- General engineering curriculum covering Systems & Networks, Data & AI, Web Development, IoT, and Cybersecurity.

Bachelor's Degree in Computer Science - Software Ecosystems

Nov. 2021 - Nov. 2024

HAUTE ÉCOLE D'INFORMATIQUE (HEI)

Antananarivo, Madagascar

- Curriculum covering front-end, back-end development, DevOps, and infrastructure automation.
- Chose the Software Ecosystems (EL) specialization, focused on backend development.

Skills

Data & AI	Python, Pandas, Matplotlib, Geospatial Data (GIS), spaCy, NLTK, Hugging Face Transformers, Apache Spark, Open-Source LLMs, Predictive Modeling
Back-end & Databases	Java, OOP, REST APIs, Spring Boot, Flask, Microservices, Celery, PostgreSQL, MySQL, JPA/Hibernate
Cloud & DevOps	AWS (EC2, Lambda, S3, RDS), Firebase, Docker, Kubernetes, CI/CD, Linux
Front-end	TypeScript, HTML5, CSS, jQuery, React, Next.js, Flutter
Tools	Git, GitHub, GitLab, Jira, Linear

Projects

Oslo Bysykkel – Predictive Modeling & Data Pipeline

ESIROI

ACADEMIC PROJECT

2026

- Developed a SARIMA time-series model to forecast hourly bike demand using historical data and real-time GBFS API streams.
- Deployed an end-to-end data pipeline on a VPS, integrating automated data collection and a live Streamlit dashboard.

FRANK – Sea Turtle Nest Monitoring (IoT)

ESIROI

ACADEMIC PROJECT

2025

- Designed an IoT device to collect environmental data from sea turtle nests, integrating temperature and humidity sensors ($\pm 0.25^\circ\text{C}$ accuracy).
- Developed a backend API (Python, Flask, MariaDB) for data reception and querying, with satellite connectivity via KINEIS.

Work Experience

Software Engineering Intern

Saint-Pierre, Reunion, France

CAPSTON.AI

June - July 2026

- Reduced single-point-of-failure risk in a data collection pipeline serving five generative AI search environments (ChatGPT, Perplexity, Claude, Gemini, Google AI Overview) by implementing fallback providers with circuit-breaker and retry logic.
- Built an evaluation framework (Label Studio, MLflow) to benchmark brand-detection accuracy against a 120-response human-annotated ground truth, using precision, recall, F1, and Cohen's kappa to correct for class imbalance.
- Diagnosed a recall of 0.44 in the existing keyword-based detector and redesigned it by combining accent-insensitive matching with a semantic similarity model, raising recall to 0.91 while maintaining precision.

Data Engineer Intern

Antananarivo, Madagascar

R@NDEVTEAM

July - October 2024

- Automated large-scale Reddit data collection, replacing manual extraction with a scheduled asynchronous pipeline.
- Cleaned and processed textual data with Pandas and spaCy (NLP), extracting structured signals from unstructured user content.
- Built interactive dashboards highlighting user interests and behavioral trends to support product decisions.

Certifications

SQL (Advanced)

HACKERRANK

Nov. 2025

Python (Basic)

HACKERRANK

Mar. 2023

Languages

French	C1 Level
English	B2 Level
Malagasy	Native language

Interests

Music	Music production (composition & mixing), piano, guitar, saxophone
Sport	Football, Beach Volley
